Demographics of Participating Colleges/Universities

Seventy eight US postsecondary institutions self-selected to participate in the Spring 2005 National College Health Assessment and 56,637 surveys were completed by students on these campuses. For the purpose of this study, only those institutions that used a random sampling technique or sampled a universe such as all 1st year students were included in the analysis, yielding a final data set consisting of 54,111 students and 71 schools. Demographic characteristics of the 71 campuses follow:
